

### Mock Exam 3

### Section A

In an air standard Brayton cycle with regeneration, the air enters the compressor at 0.1 MPa and 15 °C. The pressure leaving the compressor is 1 MPa and the maximum cycle temperature is 1100 °C. Assume constant specific heats, with  $c_v = 0.834 \text{ kJ/kg}$  K, and k = 1.344.

- (1) State briefly the purpose of regeneration in a gas turbine. State three important differences between regeneration and reheating in a gas turbine. [5]
- (2) Sketch and label the *T-s* diagram for the cycle, indicating all the important states, the direction of the cycle, and the processes where work and heat are input or output. Clearly indicate the heat transfer between the segments of the cycle that exchange heat in the regenerator.
- (3) Calculate the temperature and pressure of the air at the end of each process in the cycle given in the problem statement. [12]
- (4) Calculate the efficiency of the given cycle and compare it with that of a Carnot cycle operating under the same environmental conditions. [5]
- (5) Calculate the work output and input in the turbine and compressor, respectively. [3]

Total for Question A: 30

(This Problem is adapted from the 2014 Final Exam.)

### Mock Exam 3

#### Section B

A refrigerator using R-134a as the working fluid is to be designed to transport a vaccine that must be stored at a temperature not exceeding 8 °C . The design engineer assumes a mass flow rate 0.1 kg/s and that the fluid leaves the evaporator as a saturated vapour. The condenser pressure is set to 1.2 MPa. After taking into account the compressor efficiency under the operating conditions, it is estimated that the fluid will enter the condenser at 60 °C . The condenser operates ideally.

- (1) Sketch the cycle of the refrigerator to be designed on a T-s diagram, clearly showing the saturated liquid/vapour lines, the direction of the cycle, and the important isobars required for analysing the cycle. Indicate the processes where work and heat are input or output. In the given cycle, the adiabatic compression process (State 1 to State 2) is not quasistatic. Show the State  $2_s$  if the compressor had operated quasistatically between the given pressures of States 1 and 2.
- (2) Calculate the maximum possible COP of any refrigerator operating under the environmental conditions for which the refrigerator is being designed. [5]
- (3) Obtain the specific enthalpy of R134-a at each of the four principal thermodynamic states in the refrigerator being designed. What is the vapour fraction at the exit of the throttle valve?
- (4) Calculate the design COP of the refrigerator. [10]
- (5) For safe operation, the compressor power input is restricted to 1800 kW. In that case, if the mass flow rate is still maintained at 0.1 kg/s, without any further calculations, would you expect the COP to increase or decrease? Why?

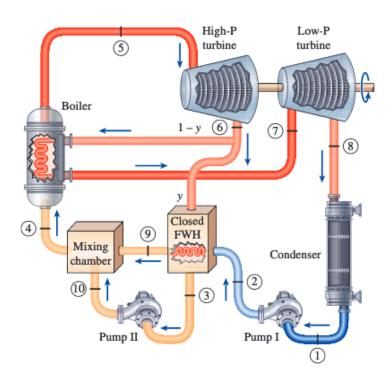

Total for Question B: 40

(This Problem is adapted from the 2021 Final Exam.)

### Mock Exam 3

### Section C

A steam power plant operates on an ideal reheat—regenerative Rankine cycle and has a net power output of 80 MW. Steam enters the high-pressure turbine at 10 MPa and 550 °C and leaves at 0.8 MPa. Some steam is extracted at this pressure to heat the feedwater in a closed feedwater heater, as shown in the figure below. The rest of the steam is reheated to 500 °C and is expanded in the low-pressure turbine to the condenser pressure of 10 kPa. The feedwater leaves the heater at the condensation temperature of the extracted steam. The extracted steam leaves the feedwater heater as a saturated liquid and is pumped to the line carrying the feedwater to be mixed with the feedwater. Assume that the turbines and pumps operate isentropically.

- (1) Sketch the cycle on a *T-s* diagram with respect to saturation lines, clearly showing the saturated liquid/vapour lines, the direction of the cycle, and the important isobars required for analysing the cycle. Indicate the processes where work and heat are input or output.
- (2) Determine the mass flow rate of steam through the boiler. [12]
- (3) Determine the boiler and condenser heat loads in MW. [5]
- (4) Determine the thermal efficiency of the cycle. What is the efficiency of the corresponding Carnot cycle? [3]

Total for Question C: 30

### Formula Sheet

## General thermodynamic relations

$$du = T ds - P dv (1)$$

$$h = u + Pv; \quad dh = T ds + v dP \tag{2}$$

$$\Delta u = q - w_b - w_{\text{elec}} \tag{3}$$

$$w_{b, \text{qs}} = \int_{v_{\text{initial}}}^{v_{\text{final}}} P \, dv \, ; \quad q_{\text{qs}} = \int_{s_{\text{initial}}}^{s_{\text{final}}} T \, ds$$
 (4)

$$0 = \sum_{\text{inlets}} \dot{M}_i \left( h_i + \frac{\mathbf{v}_i^2}{2} \right) - \sum_{\text{outlets}} \dot{M}_o \left( h_o + \frac{\mathbf{v}_o^2}{2} \right) + \dot{Q} - \dot{W}_s, \text{ at steady state}, \quad (5)$$

$$w_{s, qs} = -\int_{P_{\text{initial}}}^{P_{\text{final}}} v \, dP + \Delta \text{ke}$$
 (6)

### **Ideal Gases**

$$Pv = RT; \quad u = c_v T; \quad s = c_v \ln T + R \ln v + s_0; \quad h = c_p T$$
 (7)

$$c_p = c_v + R; \quad k = \frac{c_p}{c_v} = 1 + \frac{R}{c_v}$$
 (8)

In an isentropic process: 
$$P v^k = \text{const.}; T v^{k-1} = \text{const.}; \frac{T^k}{P^{k-1}} = \text{const.}$$
 (9)

# Vapour-Liquid systems

$$x = \frac{v - v_f}{v_q - v_f} = \frac{u - u_f}{u_{fq}} = \frac{s - s_f}{s_{fq}} = \frac{h - h_f}{h_{fq}}$$
(10)

$$v = v_f + x(v_g - v_f); u = u_f + xu_{fg}; s = s_f + xs_{fg}; h = h_f + xh_{fg}$$
(11)

# Engines, refrigerators and heat pumps

$$\eta_{\rm th} = \frac{w_{\rm net}}{q_{\rm in}} = 1 - \frac{q_{\rm out}}{q_{\rm in}} = \frac{\dot{W}_{\rm net}}{\dot{Q}_{\rm in}} = 1 - \frac{\dot{Q}_{\rm out}}{\dot{Q}_{\rm in}}$$
(12)

$$COP_{R} = \frac{q_{in}}{|w_{net}|} = \frac{\dot{Q}_{in}}{|\dot{W}_{net}|}; \quad COP_{HP} = \frac{q_{out}}{|w_{net}|} = \frac{\dot{Q}_{out}}{|\dot{W}_{net}|}$$
(13)

$$\eta_{\text{th, rev}} = \frac{T_H - T_L}{T_H}; \text{COP}_{\text{R, rev}} = \frac{T_L}{T_H - T_L}; \text{COP}_{\text{HP, rev}} = \frac{T_H}{T_H - T_L}$$
(14)

$$\eta_{\text{th, Otto}} = 1 - \frac{1}{r^{(k-1)}}; \quad \eta_{\text{th, Diesel}} = 1 - \frac{1}{r^{(k-1)}} \left( \frac{r_c^k - 1}{k (r_c - 1)} \right); \eta_{\text{th, Brayton}} = 1 - \frac{1}{r_p^{(k-1)/k}}$$
(15)

$$F_{\text{thrust}} = \dot{M}(V_{\text{exit}} - V_{\text{in}}), \ \dot{W}_{\text{prop.}} = F_{\text{thrust}} V_{\text{in}}; \eta_{\text{prop.}} = \frac{\dot{W}_{\text{prop.}}}{\dot{Q}_{\text{in}}}$$
 (16)

Source of Data: Tables A–4 through A–8 are generated using the Engineering Equation Solver (EES) software developed by S. A. Klein and F. L. Alvarado. The routine used in calculations is the highly accurate Steam\_IAPWS, which incorporates the 1995 Formulation for the Thermodynamic Properties of Ordinary Water Substance for General and Scientific Use, issued by The International Association for the Properties of Water and Steam (IAPWS). This formulation replaces the 1984 formulation of Haar, Gallagher, and Kell (NBS/NRC Steam Tables, Hemisphere Publishing Co., 1984), which is also available in EES as the routine STEAM. The new formulation is based on the correlations of Saul and Wagner (J. Phys. Chem. Ref. Data, 16, 893, 1987) with modifications to adjust to the International Temperature Scale of 1990. The modifications are described by Wagner and Pruss (J. Phys. Chem. Ref. Data, 22, 783, 1993). The properties of ice are based on Hyland and Wexler, "Formulations for the Thermodynamic Properties of the Saturated Phases of H<sub>2</sub>O from 173.15 K to 473.15 K," ASHRAE Trans., Part 2A, Paper 2793, 1983.

Source of Data: Tables A–11 through A–13 are generated using the Engineering Equation Solver (EES) software developed by S. A. Klein and F. L. Alvarado. The routine used in calculations is the R134a, which is based on the fundamental equation of state developed by R. Tillner–Roth and H.D. Baehr, "An International Standard Formulation for the Thermodynamic Properties of 1,1,1,2-Tetrafluoroethane (HFC-134a) for temperatures from 170 K to 455 K and pressures up to 70 MPa," J. Phys. Chem, Ref. Data, Vol. 23, No. 5, 1994. The enthalpy and entropy values of saturated liquid are set to zero at –40°C (and –40°F).
